

FleetTrak™

Improve safety, efficiency and productivity with greater fleet visibility

FleetTrak™ takes fleet management to a whole new level, giving you a transparent view of every vehicle's metrics 24/7.

Use the revealing insights to improve driver safety, increase efficiencies and enhance productivity.

FleetTrak™ allows you to track the usage of every vehicle in your fleet. You choose what you want to monitor and we'll work with you to customise a plan especially for your organisation. We then help you implement changes in your fleet based on the collected information.

By monitoring driver behaviour metrics, such as speeding and excessive braking, you will be able to make changes to improve driver safety and focus training programs on 'at risk' drivers, while rewarding safe drivers.

FleetTrak™ has the potential to reduce fleet operating costs by saving on fuel, automating maintenance scheduling, decreasing vehicle downtime and introducing digital logbooks that could save on Fringe Benefits Tax.

Tracking your vehicles will reveal many opportunities for improvements. You can make informed decisions and implement changes to enhance productivity to improve vehicle utilisation. You can despatch the nearest vehicle for customer call outs, which improves response times and reduces fuel costs. You can also accurately track arrival and departure time.

High ROI

FleetTrak™ is able to provide significant cost savings by improving driver safety, reducing fuel usage, enhancing fleet productivity and increasing efficiencies.

Easy to implement

We make it really easy for you to implement FleetTrak™ into your existing and growing fleet. We are able to recommend the best solution based on your requirements, conduct installation via our national installation network, and handle the day-to-day management and data reporting.

Expert support

Our consultants will ensure you make the most of the data collected. They'll help you interpret the collected information, and show you how to use the insights to introduce positive changes within your fleet.

- Identify high risk driver behaviour
- Track driver productivity
- Monitors vehicle usage
- Identifies fuel saving opportunities
