

Get ready for Australia's electric transport future

Every day we are looking for more efficient and sustainable ways to move our people and products and serve our customers. eMobility offers businesses a smarter way to power their fleet.

Electric vehicles support important environmental commitments of our customers. They also meet real world fleet requirements including lower fuel and maintenance costs and unsurpassed performance and comfort.

This is why, Origin and Custom Fleet, industry leaders in energy and fleet management respectively, have teamed up.

This partnership allows us to leverage our joint capabilities to help businesses super charge their transition to electric mobility, seamlessly.

Custom Fleet is a leading fleet management organisation in Australia and New Zealand with over 100,000 vehicles under management and almost 40 years experience providing leasing and expert fleet management solutions to business and Government.

Electric Vehicles can be up to 70% cheaper per kilometre than combustion engines.[^]

Replacing an internal combusting engine vehicle with an EV can reduce carbon emission by up to 100%, if powered by renewable energy.*

What our partnership can do for you:

Consultation

We understand all businesses are different and require different solutions. We'll conduct a full, in-depth, strategic review of your fleet to assess your vehicle and charging needs, as well as energy and load demands to provide you with a fit for purpose EV strategy.

Fleet leasing, management and financing

Custom Fleet can assist in procuring a range of EV options based on the specific needs of your fleet, provide finance and fully manage your fleet.

Quality charging infrastructure

Whether you're charging a single EV or a whole fleet, we will procure quality charging infrastructure supplied by industry leading supplier Schneider Electric

Implementation

We'll manage the installation, ensuring charging infrastructure is commissioned by full qualified electricians vetted to Origin's quality standards.

Energy management and renewable energy

Providing solutions to improve business energy consumption and avoid extra costs we use load management, smart charging and compliment EV charging with renewable energy solutions including solar and batteries.

Service and Maintenance

We can assist in the monitoring and maintenance of all your mobility and energy assets, from EV charging stations to solar energy systems.

Reporting

You will have access to insights, data and reporting on energy usage, charging session lengths and frequency.
