

Keep your drivers safe and sound

Driver Care Plus, Defensive Driver Training and FleetTrak™

- Safer drivers
- Satisfy duty of care
- Reduce risks
- Save money

Under workplace health and safety legislation, you have a duty of care to every employee who drives a vehicle for work purposes, regardless of who owns the vehicle.

Prevent accidents before they happen by initiating a safe driver culture within your organisation. Start by putting your drivers through one or more of our safety programs.

Driver Care Plus is an interactive web-based risk management and coaching platform that allows you to assess individual driver's results and risk ratings, and assign coaching modules to target specific behaviours. This information will help you establish fleet-wide benchmarks for driver behaviour and track improvements and trends over time.

Our telematics tool, FleetTrak™, integrates with Driver Care Plus and will help you further to pinpoint and train 'at risk' drivers to prevent accidents before they happen. By monitoring driver behaviour metrics, such as speeding and excessive braking, you will be able to make changes to improve driver safety, while rewarding safe drivers.

Enhance your drivers' on-road behaviour with our Defensive Driver Training. This one day course combines theory and practice in a range of courses – urban, rural, remote, 4WD. Learning important skills such as emergency braking and hazard avoidance in a safe environment could help your drivers avoid an accident.

Want to make the roads a safer place?

Your employees, your responsibility

Driver behaviour is a factor in 90 per cent of all road accidents. You can improve your drivers' safety simply by arming them with the theoretical knowledge and practical experience they need to handle their vehicle safely under any conditions.

Save money

Quite simply, safe drivers cost less. There are savings in reducing direct costs from traffic infringements and asset damage, as well as indirect costs from vehicle and worker insurance, and litigation.

Crash-free culture

Promoting a crash-free culture within a fleet can reduce accidents by up to 60 per cent. This involves driver training combined with a recognition program that rewards good and safe drivers.
